}}

```

== Purpose ==

Provides per-namespace and per-page header + footer inclusion.

== Features ==

- * Speed: integrated with parser caching
- * Secure: header and footer articles are located in the NS_MEDIAWIKI namespace
- * Controllable: headers and/or footers can be disabled on pages which are `'edit'` protected
- * Customizable: headers and footers are wrapped in `<nowiki><div></nowiki>` elements

== Usage ==

=== Per-Namespcae Header and Footer ===

Edit the pages:

- * `<code>MediaWiki:hf-nsheader-'namespace name' </code>`
- * `<code>MediaWiki:hf-nsfooter-'namespace name' </code>`

For the `'main'` namespace, just use `'blank'` i.e. no string.

=== Per-Page Header and Footer ===

Edit the pages:

- * `<code>MediaWiki:hf-header-'page name' </code>`
- * `<code>MediaWiki:hf-footer-'page name' </code>`

=== Disable commands ===

On `'edit'` protected pages, one can add

- * `<code>__NOHEADER__</code>` to suppress the page level header
- * `<code>__NOFOOTER__</code>` to suppress the page level footer
- * `<code>__NONSHEADER__</code>` to suppress the namespace level header
- * `<code>__NONSFOOTER__</code>` to suppress the namespace level footer

=== CSS ===

- * Page Level Header: `<nowiki><div class="hf-header"></nowiki>`
- * Namespace Level Header: `<nowiki><div class="hf-nsheader"></nowiki>`
- * Page Level Footer: `<nowiki><div class="hf-footer"></nowiki>`
- * Namespace Level Footer: `<nowiki><div class="hf-nsfooter"></nowiki>`

== Examples ==

Page `[[MediaWiki:hf-nsheader-Extension]]` would contain the wikitext to be included as header for all pages of the `'Extension'` namespace.

Page [[MediaWiki:hf-footer-Extension:HeaderFooter]] would contain the wikitext to be included as footer for the page [[Extension:HeaderFooter]].

== Dependency ==

* [[Extension:StubManager|StubManager extension]]
{{Pear|HeaderFooter}}

== History ==

	class=datatable
	! Release !! Notes
-	
2.0.0	Complete redesign
-	
2.0.1	Fixed bug related to disable keywords (e.g. __NONSFOOTER__)
}
